GYRODACTYLUS SALARIS ANGLER DECLARATION

Gyrodactylus salaris (GS) is the greatest threat to wild salmon in our Scottish rivers, and the UK as a whole. It is a parasitic freshwater fluke which is indigenous to rivers in parts of Russia, Norway and Sweden, where salmon have evolved resistance to it. However, GS has spread to rivers in Norway, Denmark, Germany, France, Spain and Portugal where native salmon have no resistance, resulting in mass mortality of juvenile fish. In Norway infected rivers lost 98% of their salmon within 5 years. Infected rivers must be poisoned to remove all fish hosts, and barriers erected to stop salmon entering the river to spawn and generate more hosts. GS can survive for 5 to 7 days without a host in damp conditions (eg angling clothing, waders, wet reels, lines or landing nets).

Currently the UK is GS-free. The economic and ecological consequences of GS entering the country would be catastrophic. Please do your part to prevent GS from decimating our wild salmon by signing this Angler Declaration **before fishing**.
